Corporate Sustainability Statement

Subject: Implementation of initiatives to reduce environmental impact

EUROSCAF SRL, an Italian manufacturer of lifting and access machinery established in 1991, is strongly committed to environmental sustainability. The company has adopted several measures aimed at reducing its environmental footprint and promoting a transition towards more responsible industrial practices.

1. Replacement of Neon Lighting with LED Systems

EUROSCAF has completed the replacement of all traditional neon lighting with LED systems:

- In the production facility, improving energy efficiency in all operational areas.
- In the office spaces, ensuring better illumination and lower energy consumption.

This transition has led to:

- An energy reduction of up to 60% compared to traditional lighting.
- A measurable decrease in CO_2 emissions due to lower electricity demand.

2. Waste Management

- **Responsible disposal:**
  All company waste is properly sorted and delivered to authorized recyclers.
  Iron scraps are collected and sent to steel mills for reuse, supporting raw material recovery and circular economy principles.

3. Sustainable Products

- **Design for sustainability:**
  EUROSCAF continuously improves the design of its machines to enhance efficiency and reduce environmental impact.
  All lifting platforms and hoists are fully electric, eliminating fossil fuel emissions and reducing noise and maintenance requirements.

4. Internal Policies and Employee Awareness

- **Environmental awareness:**
  Employees are regularly informed and encouraged to adopt sustainable practices in their daily activities.
- **Resource efficiency:**
  Company restrooms are equipped with:
  - Soap dispensers to minimize waste.
  - Sensor-activated water taps to reduce water consumption.
  - Air hand dryers replacing disposable paper towels.

5. Renewable Energy Supplier – ENI Plenitude
EUROSCAF has chosen ENI Plenitude as its electricity provider, guaranteeing that 100% of the electricity used comes from renewable sources, including:

- Solar energy
- Wind energy
- Hydroelectric energy

Through this choice, EUROSCAF actively contributes to the decarbonization of the energy system and supports the development of renewable energy production in Italy and across Europe.

6. Continuous Improvement
These initiatives represent an important step towards a structured sustainability strategy. EUROSCAF remains committed to further improving its environmental performance by expanding the use of renewable energy, optimizing resource management, and fostering a culture of sustainability throughout the organization.
